Why do you want to join Tensors webOps team? How's it different from other webops teams in insti?

Well, to be honest, I came to know about Tensors for the first time, only when your coord application was rolled out. At first I thought Tensors too is like some other student clubs in insti. Then I started researching about it through your websites, instagram handle and LinkedIn, and the result was stupendous. There is a whole student run NON-PROFIT organization out there working at NATIONAL level. Wow! Okay Tensors is my next target. And fortunately for me, the post in need was WebOps coordinator. I am super-passionate about WebOps (thinking of doing it as my career as well!). I am searching for all the ways that I could use to improve my skills. I learnt HTML when I was in high school and got the amazing opportunity to maintain my school's student portal. Then I mastered it along with CSS and JS. Now I am on my way doing React and Django(for backend). Tensors webops is totally different from other WebOps teams because we are working for a 'greater cause' and for the benefit of the society as a non-profit organisation. This was the main reason why I wanted to join in. Doing something for the people who are experiencing situations that once I was in (and suffered) is a really cool thing. I wish to give all my best in any way possible to help the JEE students as well as the other NGOs and innovators as a WebOps Coordinator in TENSORS.
